A NEW DIMENSION IN ALL-PURPOSE ELECTRONIC CALCULATORS

US★8/10

commodore

A DIFFERENT BREED OF CALCULATOR THAT IS FOUR TIMES BETTER

1 **There is a great deal of difference between saying one calculator is better and proving it. But, we can .**

Because we made it. Right here in the U.S.A. When our electronic people set out to develop the US★8, they knew what competition offered. They also knew that for America to regain its position in the figuring equipment industry, our new series would have to excel in every category. They could not afford to build just another calculator. Their's would have to be superior in performance, design, and engineering.

2 **More Features at Less Cost**

Until our new US★8 came along, you could measure the number of features in a calculator by the price you paid for it. Thanks to advanced American technology the eight digit US★8 offers greater versatility than ever before.

Instant, Silent, Easy Operation

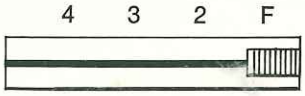
The miracle of subminiature Super Large Scale Integration (S-LSI) space age technology makes even the most complex chore exceptionally easy.

Four Function Performance

Add, subtract, multiply and divide.

Two decimal systems are better than one

Your US calculator puts two different decimal systems at your fingertips. Place the indicator at "F" and the decimal point will float to the proper position in your answer. Automatically.



Or, preset the decimal to a fixed position and your results are automatically locked into this setting. (Great for exact currency work)

Constant Memory

Simply engage the Constant key to automatically lock in a common multiplier or divisor, and make the most tedious billing or discounting task an easy chore.

A true mathematical mind

Equally automatic is the US★8's algebraic logic. It can multiply a negative figure by a positive number and divide the result by another negative to give you a perfect answer with the proper sign. So don't be surprised if the youngsters discover that the US★8 is the perfect problem solver for those tricky homework assignments.

Two clear keys for added figuring ease

In addition to the [C] All-Clear key, there is also a [CI] key for electronic erasing. Touch it and you remove the last entry without destroying previous work. You needn't begin all over again.

Automatic credit balance

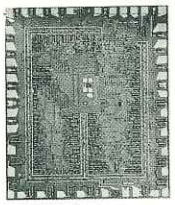
Add +4 −7

Result: −3. The bold negative signal lets you know you're in the red. It's entirely automatic.

3 **SUPER Miniature Brain Cell**

The US★8 is made to do so much, be so compact, and cost so much less...simply because of a tiny, solid state speck which carries more brainpower than 1,700 complex transistors. Just one chip of silicon, provides lightning-fast results with greater reliability, efficiency and economy.

■ ACTUAL SIZE



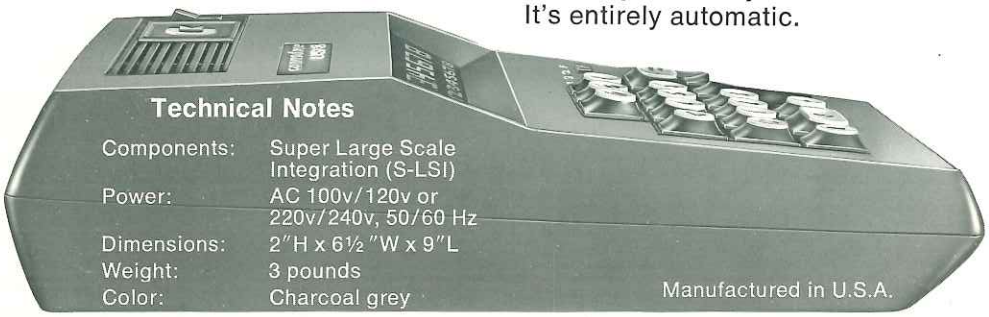
(LSI CHIP ENLARGED)

Our engineers call this marvel in subminiaturization, "Super Large Scale Integration." It is S-LSI brainpower that makes the US★8 incredibly accurate and practically service free.

4 **US★10**

The Model US★10 is identical to the US★8 in features and performance with the extra advantage of a larger, 10-digit figuring capacity.

99,999,999.99



Technical Notes

Components:	Super Large Scale Integration (S-LSI)
Power:	AC 100v/120v or 220v/240v, 50/60 Hz
Dimensions:	2"H x 6½"W x 9"L
Weight:	3 pounds
Color:	Charcoal grey

Manufactured in U.S.A.

C10161 Printed in U.S.A.
